

Unit 12.3 Highlights

GROUP BY - Used with aggregate functions (COUNT, MAX, MIN, SUM, AVG) to group the result-set by one or more columns

Ex. 1

```
SELECT column_name(s) /* basic CREATE DATABASE format */
FROM table_name
WHERE condition
GROUP BY column_name(s)
ORDER BY column_name(s);

SELECT COUNT(PlanetId), Galaxy
FROM Universe
GROUP BY Galaxy
```

BETWEEN - selects values within a given range. The values can be numbers, text, or dates.

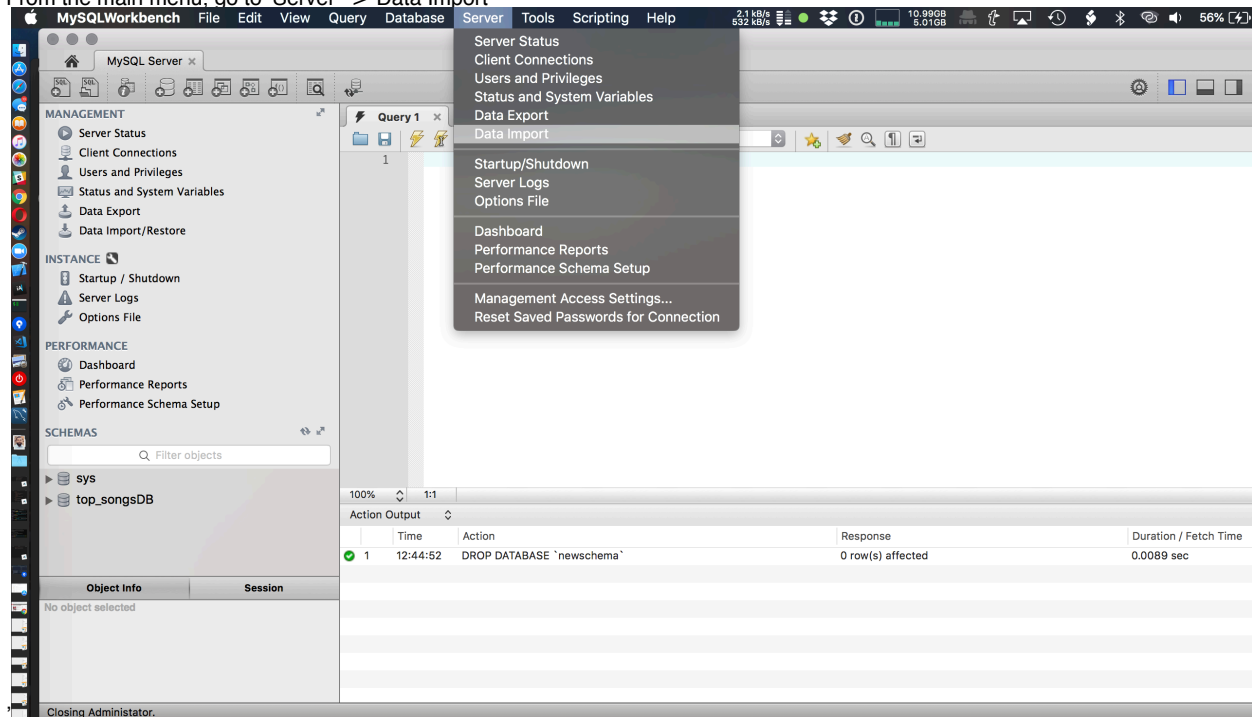

Ex. 2

```
SELECT column_name(s) /* basic CREATE DATABASE format */
FROM table_name
WHERE column_name BETWEEN value1 AND value2;

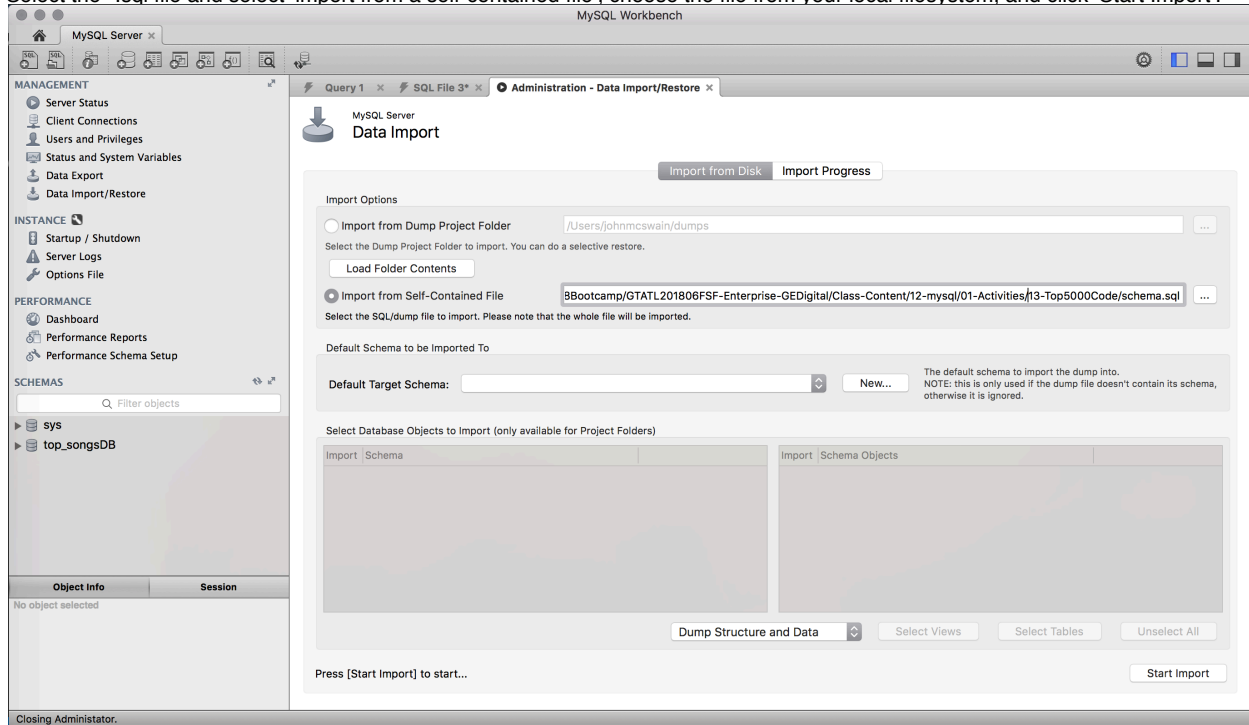

SELECT * FROM University
WHERE Championships_won BETWEEN 20 AND 50;
```

Importing Schema files into MySQL Workbench

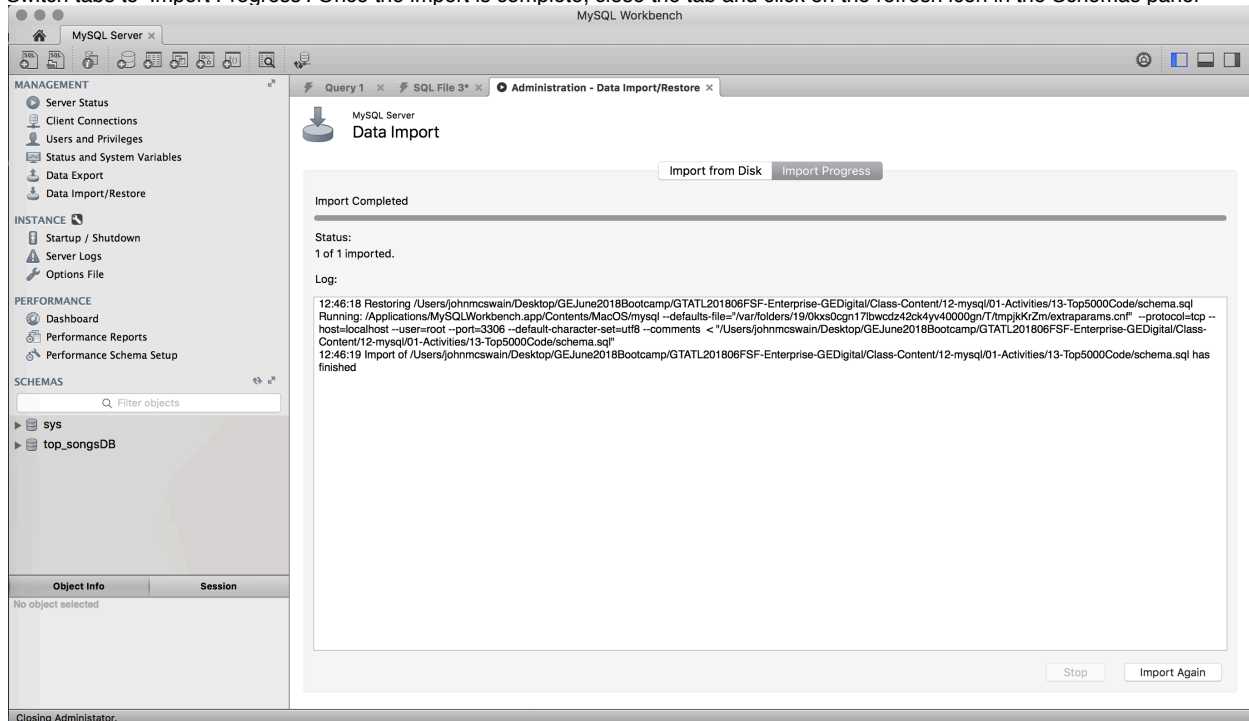

From the main menu, go to 'Server' -> 'Data Import'

Select the *.sql file and select 'import from a self-contained file', choose the file from your local filesystem, and click 'Start Import'.

Switch tabs to 'Import Progress'. Once the import is complete, close the tab and click on the refresh icon in the Schemas panel

Click the Schema refresh icon to see the new database

The screenshot shows the MySQL Workbench interface. On the left, the 'SCHEMAS' panel is expanded, showing the 'top5000' database. A green arrow points to a small circular icon with a refresh symbol (a circular arrow) located at the bottom of the 'top5000' database entry. A green text label 'schema refresh icon' is placed next to the arrow. The main window displays a query result grid for the query 'SELECT * FROM top_songsDB.top5000;'. The grid has columns: position, artist, song, year, raw_total, raw_usa, raw_uk, raw_eur, and raw_row. The first row shows values: 1, Drake, Way 2 A Way, 2015, 1000000000, 1000000000, 1000000000, 1000000000, and 1. The status bar at the bottom indicates 'Export resultset canceled'.

MySQL Workbench

Query 1 x SQL File 3* x Administration - Data Import/Restore x top5000 x

1 • SELECT * FROM top_songsDB.top5000;

Limit to 1000 rows

100% 1:1

Result Grid Filter Rows: Search Edit: Export/Import:

position	artist	song	year	raw_total	raw_usa	raw_uk	raw_eur	raw_row
1	Drake	Way 2 A Way	2015	1000000000	1000000000	1000000000	1000000000	1

Table: top5000

Columns:

- position int(11) PK
- artist varchar(100)
- song varchar(100)
- year int(11)
- raw_total decimal(10,4)

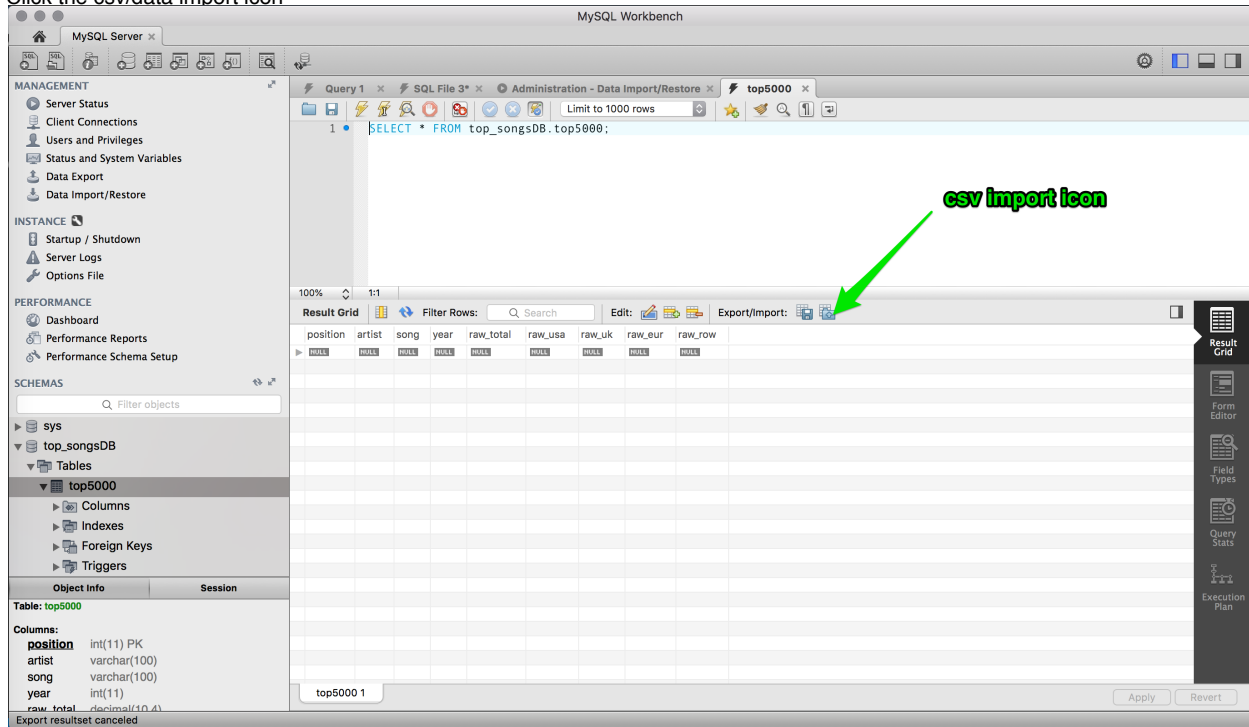

top5000 1

Export resultset canceled

Importing CSV files into a MySQL table

Click the csv/data import icon

Choose the file path to the applicable CSV file.

Choose 'Use existing table' and click 'Next'

Table Data Import

Select Destination

Select destination table and additional options.

☒ Use existing table:

☐ Create new table: .

☐ Truncate table before import

< Back Next > Cancel

Review column assignments and click 'Next'

Table Data Import

Configure Import Settings

Detected file format: csv
